

Gutmann
for perfect performance

The CLEANSTER disc brush

Save time and resources
by endurance

CLEANSTER achieves high sustainability through perfect interaction of the filaments.

The Gutmann CLEANSTER scrub brush

CLEANSTER is the only scrub brush with an intelligent double bristle function. It prevents the cleaning solution from being ejected from the brush area.

Thus an excellent cleaning result is obtained. Stiff filaments remove stubborn dirt while fine filaments perform precision work and are effective in the smallest cavities.

Make your machine even more eco-friendly with CLEANSTER and help to reduce the labour costs of your customers.

With the use of CLEANSTER manufacturers improve the sustainability of their machines and reduce the labour cost of their customers. CLEANSTER cleans up to 25 % more area with less time required. This clearly saves water and cleaning agents.

The Gutmann added value for your machines

Offer optimal benefit to your customers:

Good for environment
by less cleaning agents

Saves time
and
labour costs

Wear indicator

Reduces time spent
filling and emptying
the machine

Higher area output

Saves up to 25 %
water

Your innovations are our challenge

We give support with our competence and experience and we support you in developing suitable components for your new cleaning concept.

The best performance for your machine

We adapt our products perfectly to your machine with excellent properties for your competitive advantage.

Flexible structures for an economical production

A flexible manufacturing structure allows us the efficient and economical production of prototypes, small, medium and large series.

Fast and reliable response times

Our lean organization as well as a close relationship to our customers allows us to react quickly to new situations.
