

Gutmann
for perfect performance

HYBRID BEAR for pads on eccentric
and orbital machines

The hybrid system for
flexible pad adhesion

The HYBRID BEAR system

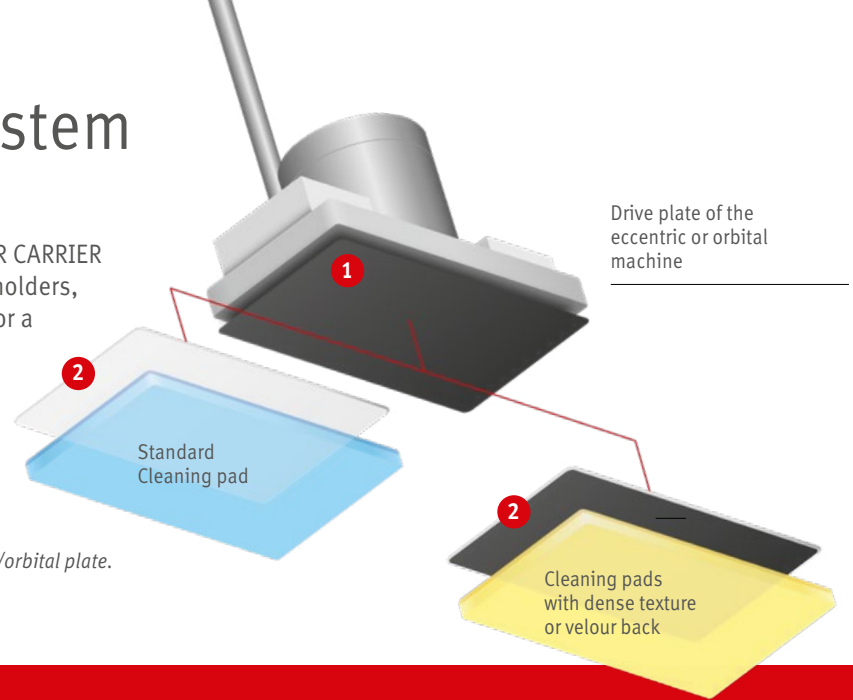

1 The HYBRID BEAR CARRIER

Firmly bonded to the machine, the HYBRID BEAR CARRIER ensures a stable hold of the HYBRID BEAR pad holders, which can be easily exchanged in case of wear or a different application.

2 The HYBRID BEAR pad holders

Effortlessly anchored to the CARRIER the pad holders guarantee a secure hold and drive of the cleaning pads.

Optionally also available for direct bonding to the eccentric/orbital plate.

Drive plate of the eccentric or orbital machine

The HYBRID BEAR system enables the highest flexibility and serviceability of eccentric and orbital machines.

The use of different pad holders opens up new possibilities. The machine can be adapted quickly and efficiently to the required pad.

In the event of servicing and compared to a conventionally glued drive face the HYBRID BEAR pad holder can be replaced in seconds.

The non-slip system guarantees an absolutely secure hold even at the highest frequencies as well as the loss-free transmission of vibrations from the machine to the cleaning pad.

The Gutmann added value for your machines

Offer optimal benefit to your customers:

Intelligent technology

For a firm hold and gentle release of the pads

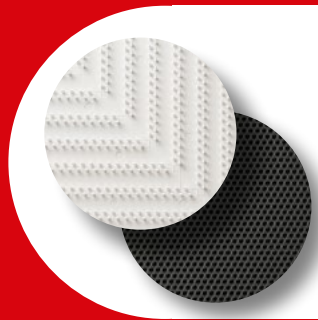

Highly service friendly

Quick and easy replacement of drive face

Durable quality

Highly resistant to chemicals

HYBRID BEAR pad holder for different pads

- Pad holder WHITE with innovative hook geometry for all standard floor cleaning pads
- Padholder BLACK with fine mushroom shaped micro studs for pad backs with dense texture or velour backing

We would be pleased to develop further special pad holders.

Your innovations are our challenge

We give support with our competence and experience and we support you in developing suitable components for your new cleaning concept.

The best performance for your machine

We adapt our products perfectly to your machine with excellent properties for your competitive advantage.

Flexible structures for an economical production

A flexible manufacturing structure allows us the efficient and economical production of prototypes, small, medium and large series.

Fast and reliable response times

Our lean organization as well as a close relationship to our customers allows us to react quickly to new situations.
